**VIDYASAGAR UNIVERSITY**

**Question Paper**

**B.Sc. Honours Examination 2023**

(Under CBCS Pattern)

Semester — II

Subject : CHEMISTRY

Paper : C-3T

(Inorganic Chemistry—I)

Full Marks : 40

Time : 2 hours

Candidates are required to give their answers  
in their own words as far as practicable.

The figures in the margin indicate full marks.

Answer from all the Groups as directed.

**GROUP—A**

1. Answer any five questions from the following :

$2 \times 5 = 10$

- (a) How many radial nodes and nodal planes do  $4d$  and  $5f$  orbitals each have?

( 2 )

- (b) Calculate the pH of  $10^{-9}$  (M) NaOH solution.

(c) Why is the disproportionation of  $\text{ClO}^\ominus$  favoured in presence of  $\text{Ag}^+$ ?

(d) Show that  $e^{\alpha x}$  is an eigenfunction of the operator  $d^n/dx^n$ . What is the eigenvalue?

(e) The stabilisation of a half-filled  $d$ -subshell is even more pronounced than that of the  $p$ -subshell. Why?

(f) State the theory by which the reaction

may be regarded as an acid-base reaction.

(g) Ge(II) compounds are reducing agents, while Pb(IV) compounds are oxidising agents. Explain.

(h) State the role of  $\text{NH}_4\text{HF}_2$  in the titration of Fe(II) ion with  $\text{K}_2\text{Cr}_2\text{O}_7$ .

( 3 )  
GROUP—B

Answer any four questions from the following :  
 $5 \times 4 = 20$

2. (a) When an excited nucleus decays, it emits a  $\gamma$ -ray. The lifetime of an excited state of a nucleus is of the order of  $10^{-12}\text{s}$ . What is the uncertainty in the energy of the  $\gamma$ -ray produced? 3

(b) The solubility product ( $K_{sp}$ ) of  $\text{MgF}_2$  is  $7 \times 10^{-10}$ . Find its solubility in 0.01 (M)  $\text{NaF}$  solution. 2

3. (a) Draw the acid-base neutralisation curve for  $\text{CH}_3\text{COOH}$  vs  $\text{NaOH}$ . Name the suitable indicator in this titration. 2

(b) Calculate the electronegativity of Bromine (Br) in Mulliken's scale and hence, find out the electronegativity of Br in Pauling's scale.

Given : IE (Br) = 272.3 kcal  $\text{mol}^{-1}$   
EA (Br) = 77.7 kcal  $\text{mol}^{-1}$

1 eV per atom = 23.06 kcal  $\text{mol}^{-1}$  3

/657

(Continued)

( Turn Over )

( 4 )

4. (a) Draw the curves indicated below for the 3S-orbitals of hydrogenic systems. 3

- (i)  $R(r)$  vs  $r$   
(ii)  $R(r)^2$  vs  $r$   
(iii)  $4\pi r^2 R(r)^2$  vs  $r$
- (b) Calculate the potential of the cell : 2

Given :  $E_{\text{Zn}}^{\circ}/\text{Zn} = -0.76 \text{ V}$ ;  $E_{\text{AgCl}(\text{s})/\text{Ag}}^{\circ} = 0.24 \text{ V}$

5. (a) Give the order of acidity of the following and rationalize the trend : 2

- (b) By using the Slater's rule, calculate the first ionisation energy of Be atom. 3

6. (a) Write down the Schrödinger wave equation in Hamiltonian operator form in Cartesian coordinates. What is the significance of Hamiltonian operator? 3

- (b) What is auride ion? Why is it formed? 2

- ( 5 )  
7. (a) Calculate the solubility product of  $\text{Cu}(\text{OH})_2$  from the following data : 3

$$E_{\text{Cu}^{2+}/\text{Cu}}^{\circ} = 0.337 \text{ V}; E_{\text{Cu}(\text{OH})_2/\text{Cu}, \text{OH}^{-}}^{\circ} = -0.224 \text{ V}$$

- (b) Why are the atomic radii of Zirconium (Zr) and Hafnium (Hf) almost same? 2

GROUP—C

Answer any one question from the following :

$$10 \times 1 = 10$$

8. (a) What are the differences between ionisation potential and electrode potential of a metal? 2

- (b) A line in the Lyman series of hydrogen has a wavelength of  $1.03 \times 10^{-7} \text{ m}$ . Find the original energy level of the electron. 2

- (c) Using Slater's rules, determine  $Z'$  for a  $4f$  electron of Praseodymium (Pr) [Z = 59]. 2

(6)

- (d) Arrange the following in order of increasing basicity and explain : 2

- (e) Deduce the ground state term symbol for  $\text{Co}^{2+}$  ion ( $Z = 27$ ). 2

9. (a) Calculate the kinetic energy of an electron that has a de Broglie wavelength of 200 pm. 2

- (b) Calculate the potential of the solution at the equivalence point and at the  $\pm 1\%$  stages of the equivalence point in the titration of 100 ml of 0.1 (N)  $\text{Fe}^{2+}$  with 0.1 (N)  $\text{KMnO}_4$  in 1 (M)  $\text{H}_2\text{SO}_4$  at 25 °C. 3

Given :  $E^\circ_{\text{Fe}^{3+}/\text{Fe}^{2+}} = 0.77 \text{ V}$ ;  $E^\circ_{\text{MnO}_4^-/\text{Mn}^{2+}} = 1.51 \text{ V}$

- (c) Justify the directions of the following reactions : 2

(7)

- (d) In group IIIA for precipitation of  $\text{Fe}^{3+}$ ,  $\text{Al}^{3+}$ ,  $\text{Cr}^{3+}$  mixture of  $\text{NH}_4\text{Cl} + \text{NH}_4\text{OH}$  is used but not NaOH. Explain. 2

- (e) Write down the structure of the oxidised form of BDS indicator. 1
