

2025

**M.Sc. 1st Semester Examination**  
**APPLIED MATHEMATICS**

Paper : MTMC401X2

[Complex Analysis]

Full Marks : 25

Time : One Hour

*The figures in the margin indicate full marks.*  
*Candidates are required to give their answers*  
*in their own words as far as practicable.*  
*Notations and symbols have their usual meanings.*

**Group - A**Answer any *two* questions :  $2 \times 2 = 4$ 

1. With necessary conditions, write the Homotopy form of Cauchy's theorem. [CO1]

2. Using the argument principle, evaluate  $\int_C \frac{f'(z)}{f(z)} dz$  when

$$f(z) = \frac{(z^2 + 1)^2}{(z^2 + 3z + 2)^3} \text{ and } C: |z| = 2, \text{ taken positive}$$

sense. [CO2]

P.T.O.

( 2 )

3. Show that the function  $e^{-\frac{1}{z^2}}$  has no singularities. [CO1]

4. Find Branch point (if any) of  $f(z) = \frac{\sin \sqrt{z}}{\sqrt{z}}$ . [CO1]

**Group - B**

Answer any two questions : 4×2=8

5. (i) Classify the singularity  $z = 0$  of the function

$$f(z) = \frac{\cosh(z^3) - 1}{z^7}$$
 in terms of removable, pole and essential singularity. In case  $z = 0$  is a pole, specify the order of the pole. [CO1]

(ii) With the help of residue theorem, evaluate

$$\int_C \frac{\cosh(z^3) - 1}{z^7} dz, \text{ where } C: |z|=1 \text{ taken in the positive direction. } 4+4 \text{ [CO1]}$$

6. Using the principle of residue, evaluate

$$\int_0^\pi \frac{d\theta}{a + \cos \theta}, a > 1. \text{ [CO2]}$$

7. State and prove Casorati-Weierstrass's theorem. [CO2]

8. Prove that all the roots of the equation  $z^5 - 12z^2 + 14 = 0$  lie between the circles  $|z|=1$  and

$$|z| = \frac{5}{2}. \text{ How many roots lie inside } |z|=2. \text{ [CO2]}$$

( 3 )

**Group - C**

Answer any one question : 8×1=8

9. (i) Show that if an analytic function  $f(z)$  has a pole of order  $m$  at  $z = a$ , then,  $\frac{1}{f(z)}$  has a zero of order  $m$  at  $z = a$ .

(ii) Using the calculus of residue evaluate

$$\int_0^\infty \frac{2x^2 - 1}{x^4 + 5x^2 + 4} dx. \text{ 2+6 [CO2]}$$

10. (i) What is the winding number? Explain it briefly.

(ii) If  $f(z)$  behaves as a meromorphic function inside  $C$ , also analytic and non-zero on  $C$  then prove that

$$\int_C \frac{f'(z)}{f(z)} dz = 2\pi i \times (\text{winding number}). \text{ 2+6 [CO2]}$$

Internal Assessment : 5 marks
